

2nd Regional Meeting on Tools for the Sustainable Management of Transboundary Aquifers
 Johannesburg, South Africa
 28 November – 02 December 2016

Meeting convened in the framework of:

- *Governance of Groundwater Resources in Transboundary Aquifers (GGRETA Project) – Stampriet Transboundary Aquifer System (STAS) project*
- *Resilience in the Limpopo Basin (RESILIM) - The Potential of the Transboundary Ramotswa Aquifer (RAMOTSWA) project*
- *Sustainable Groundwater Management in SADC Member States project*

DRAFT PROGRAMME

Background and Objectives of the Meeting

Following the successful outcomes of the 1st Regional Meeting on Tools for the Sustainable Management of Transboundary Aquifers held in July 2015, this meeting is the second in a row of regional meetings on transboundary aquifers in the Southern Africa region. It addresses contemporary issues related to the management of transboundary aquifers in the region, with particular focus on the Stampriet and the Ramotswa transboundary aquifers, shared between Botswana, Namibia and South Africa; and Botswana and South Africa, respectively. Both projects related to these aquifers (led by UNESCO-IHP and IWMI, respectively) are moving into the second phase, and this meeting will take stock of progress and next steps. It will also provide essential training related to legal and institutional tools and approaches to management of transboundary aquifers.

The outline of the program is as follows:

- **Day 1:** Plenary presentation and discussion of project progress and integration into regional efforts on transboundary aquifers
- **Day 2-3:** Training on frameworks and tools to support the assessment and management of transboundary aquifers, such as international water law (including its linkages and interaction with domestic water legislation), institutional capacity, conjunctive management and gender
- **Day 4-5:** Technical workshop related to Ramotswa only

Target audience: Project partners of [Stampriet](#) and [Ramotswa](#) projects, including Ministry representatives, regional organizations, regional institutes such as the SADC-Groundwater Management Institute (SADC-GMI), focal points on groundwater management in the SADC member states, and international water management institutions.

DAY 1 • Monday, 28 November 2016, Johannesburg

Status and Progress on Stampriet and RAMOTSWA Projects

Objectives:

- Presentation of the Stampriet Transboundary Aquifer System (STAS) assessment rationale, main achievements and findings
- Presentation of the Ramotswa Transboundary Aquifer Project (RAMOTSWA) rationale, main achievements and findings
- Sharing experiences on transboundary aquifer cooperation in SADC

International Water Law Training

Objectives:

- Provide training in international water law (including linkages with national water law) by presenting the principles and the practice of international law as it applies to transboundary water resources, with a special attention to transboundary aquifers.
- Map out and assess the state of international water law, and address compliance by teasing out the linkages between international legal obligations and domestic water legislation as regards transboundary water resources. As a result, participants:
 - will be exposed to:
 - the principles and practice of international water law, with special attention to transboundary aquifers;
 - linkages between international water law and domestic water legislation;
 - issues of domestic compliance with international water-related transboundary obligations;
 - will get a good grasp of the legal underpinnings of water resources at the transboundary level, including compliance through national water legislation.
